

SystemOne Adding Trading Partner

To register a new Electronic Data Interchange (EDI) trading partner or trader in TPP SystemOne, you must configure the laboratory, screening service, or external messaging link through the system's administration and setup trees.

Step-by-Step Configuration

1. **Access Setup Menu:** Navigate to **Setup > Users & Policy > Staff & Organisation Setup**. You must log in with a smartcard that has **System Administrator** access rights.
2. **Open EDI Setup:** Click on the **EDI Setup** tab. A dialogue box titled "**Link to Pathology/Radiology Labs**" (or local messaging/screening equivalents) will appear.
3. **Add New Trading Partner:** Click **Add Lab** to create a blank entry if the specific trader is not already visible in your organisation's master list.
4. **Enter Organisation Details:** Input the unique 15-character **Organisation Cipher / EDIFACT ID** provided by the trading partner. This configuration mapping is critical for your practice to receive Electronic Data Transfer (EDT) files securely.
5. **Confirm and Reboot:** Click **OK** to save changes. Safely log out of SystemOne and restart the application to apply the routing tables.

Name of lab – CHFT WinPath Enterprise
